ETI 7000 Moisture Meter

- ✓ Incorporates Five Easy to Read Scales
- ✓ Concrete, Plaster, Timber & Reference Scales
- ✓ Supplied Complete with Carrying Case

The ETI 7000 general purpose moisture meter combines the scales of both timber and building moisture meters. The instrument is housed in an ABS case within a custom-made carrying case. The ETI 7000 incorporates a clear analogue meter which has five colour-coded scales:- wood 1, wood 2, plaster, concrete and a reference scale. The reference scale is calibrated 1 to 10 and is used to take comparison readings without reference to moisture % content.

The wood/timber scales are calibrated from 14% or 15% to 30%, with a moisture content of 20% considered to be the upper safe limit for general use. The scales incorporate colour-coding, red showing above 20% and green below. Comprehensive tables of wood groups are supplied for use with wood/timber scales 1 and 2.

The ETI 7000 moisture meter is ideal for checking the moisture content levels of virtually any hygroscopic building material - construction timber, wood flooring, concrete, brickwork, walls, roofing and insulation materials.

Each moisture meter is supplied complete with a hand held probe, carrying case, battery, instructions for use and 50 spare replacement pins.
