Standard Vibration Meter, Probe & Accessories

The MTN/VM110 Vibration Meter is a battery powered, portable instrument designed to operate with a constant current type accelerometer (10mV/g sensitivity) to make vibration measurements simple and convenient.

Both RMS and Peak detection of acceleration, velocity and displacement can be made in three ranges.

A switched low pass filter for the reduction of wide band noise is provided.

An AC output via a 'D' type output socket allows the connection of additional filters or a signal analyser. A DC output is also provided to drive a chart recorder.
