AIR FLOW CAPTURE

SwemaFlow 233

Air flow capture with telescopic handle for quick and accurate flow measurement over ventilation exhaust valves. The Swema measuring principle with a net of hot wires is unique. The net gives an accurate average flow and allows a wide opening, which minimises the throttle effect of the flow. When you want to measure supply flows use the foldable supply air hood.

Digital display

The big digital display shows directly the flow with one decimal. By pressing a button you select to show l/s or m³/h. By pressing both buttons you activate the display light.

Telescopic handle

You can adjust both the angle and length of the handle. This makes it easy to measure on outlets and inlets, both on the ceiling and high up on the wall without using a ladder.
