**SPCCI** 

# POWER CABLE CUTTERS

**TECHNICAL SHEET** 

### D USE

Ultra safe integrated electrohydraulic cable cutters without hydraulic hose to check absence of voltage on underground power cables. Use on the following cables:

Outside diameter	Total conductor cross section		wire steel armour	Steel strip armour	Flat wire steel armour
Up to 140 mm	From 6 mm <sup>2</sup> up to 2500mm <sup>2</sup>		Up to Ø 4 mm	Thickness up to 4 mm	Thickness up to 4 mm

## ADVANTAGES

- Network protection by creating a phase-to-earth fault using the PICK.
- Remotely controlled cable cutter for voltage absence check.
- Maximum transited short-circuit current (Ph-G): 31kA/1s or 43kA/0.5s.
- Earthing of the pick as close as possible to the conductor.
- Energy via standard 24 V 3 Ah battery.
- Secure positioning of the tool on the cable.
- Suspension straps for working the tool at height.
- Aluminum earthing cable for easy transport.
- Compact integrated electro-hydraulic unit with automatic double speeds (fast approach / work).
- Eliminates the risks of injuries due to hydraulic hose punctures and saves its related maintenance costs.
- Robust & light: reinforced polyamide structure, aluminum hydraulic and treated steel blades
- Two PICOUP tools 100 and 140 mm openings with pick for pricking and cutting network cables protected by circuit breakers. The pick creates a phase-to-earth fault on one of the 3 phases cut simultaneously. Avoids short circuits between phases generating more damage to the installations.
- Eliminates the need of cartridge powered or manual cable spikers prior the cutting operation.
- Reopening of the cutting blades by double-acting hydraulic force to prevent them from jamming.
- One 140 mm opening cutting tool for transmission voltages single-core cables.
- Remote-controlled cable cutters from a distance up to 100m to protect the user and third parties from the effects of a live cut.
